

PVM - V Shaped Mixer

Introduction:

The PerMix PVM series V shaped Mixer, sometimes also called Y shaped Mixer, is one type of the well-known **Tumbler Mixer** (the other type is the PerMix PDC series Double Cone Mixer) which is very popular for the intimate blending of free flowing dry powders, granules, and crystals. It is featured by the very simple design and easy to clean construction.

PerMix PVM series V shaped Mixers are featured by a gentle high-flowing mixing process for solids/solids in a proportion of up to 1:100.000 with the possibility of using an intensifier bar to enhance the mixture, and solids/liquids in powder or granulate form with different specific weights.

Advantages:

- Minimized distortion to the materials due to absence of any moving blades
- No contamination due to the closed area by only stainless steel walls
- Especially suitable to mix powders or granules which are temperature sensitive, easily oxidizable, crystallized, volatile, poisonous or with irritating smell

- Many options are available as variable speed, automatic stop in discharge position, air operated valve, touch screen operating panel, safety fence, etc.

How It Works:

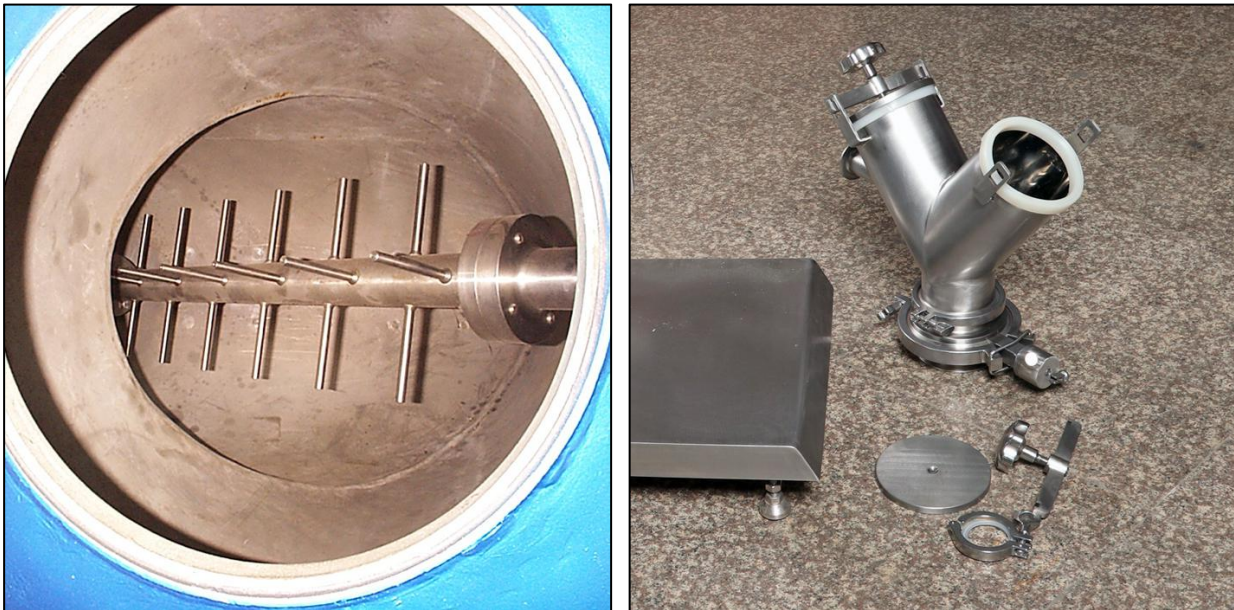

The PerMix PVM series V shaped Mixer has a "V" chamber made up by two cylinders. Powders and granules are fed into the V chamber either manually or by a vacuum conveyor.

A gear motor drives V chamber to roll in 360 degrees. This multi-dimensional motion makes the powders and granules inside tumbling up and down and colliding to each other all the time, and achieve uniform mixing in short time.

A safety barrier or enclosure is often mounted in the front of or surrounding the mixer, supplying the safety function to stop the mixer immediately when the barrier or enclosure is open, and prevent the mixing vessel to run when the barrier or enclosure is not closed.

Features & Options:

The simplicity of design of the PerMix PVM series V shaped Mixer allows a low initial cost, easy maintenance and simple operation. It is available from the 2 liter laboratory to large industrial 6000 liter units. The PerMix PVM series V shaped Mixer can be supplied with a variety of accessories, including:

- Internal choppers
- Detachable vessels
- Vacuum/Drying execution
- Special spray unit
- Special safety fence
- Mobile trolley
- PLC control & touch screen

Applications:

The PerMix PVM series V shaped Mixers are widely used in pharmaceuticals, colors, plastics resins, food products, ceramic glazes, metal powders, cosmetics, detergents, insecticides, explosives materials, and a lot of others.

- Pharmaceuticals

Supplements, Active ingredients, Silica, Sugar, Tablet coating

- Chemicals

Graphite, Alumina, Inorganic powder, Dye stuff, Silica, Adhesives, Agricultural supplements, Plastic powders, Colored cement mixes, Glass ingredients, Insulation materials

- Food & Beverage

Sugar, Aspartame, Fragrance, Spice, Dextrin, Chocolate mixes

- Cosmetics & Daily Care

Baby powder, Tooth paste, Cosmetic creams, Detergents, Cleaning compounds

Specifications:
